## SERVICES

Persentus is a dedicated group of people available to you for the purpose of providing innovative solutions to your facility problems. Whether you're looking at reducing operation and maintenance costs or planning a future expansion we have solutions that can reduce life-cycle costs and improve the environment of your building. We have expertise with both commercial and industrial facilities and can focus on every aspect of your facility from the shell, to your mechanical and electrical systems.

## HOW WE WORK

Persentus will provide an audit of your building, equipment and energy records to find potential overpayments of bills and opportunities to reduce your energy costs. This audit will often be followed by a study of areas that are identified as having a potential for a high return on investment. Our audit of your facility may uncover areas of opportunity such as those listed below.

- **Power Cost Reductions:** Have you ever wondered if there was a way to reduce what you pay for your utilities?
- **Equipment Energy Usage:** Do you know how efficient/inefficient your equipment is, and how much that inefficiency may be costing you?
- **Controls:** Have you ever looked into modifying your building controls to optimize energy usage?
- **Heat Loss:** Did you know that you might be losing money in the form of heat loss from your building and equipment?
- **Electric Fixtures:** Have you ever looked into the savings potential in replacement, improved control, or modification of your electrical equipment and fixtures?
- **Plumbing System:** Do you know how much water you waste, and what that costs you?
- **Variable Speed Drives:** Do you have variable use spaces but provide constant volume control?
- **Meters:** Did you know that your water, gas and electric meters can overestimate your actual usage?
- **Other Energy Solutions:** Have you ever wondered if there was a way to save money by incorporating new technologies into your building and building systems?

## SOLUTIONS

As your energy partner, Persentus will review and analyze avenues to reduce your building and equipment operating costs. Your savings may be obtained through reductions in energy consumption, improvements in production, operation and maintenance savings, and procurement of rebates and grants. We believe that by evaluating each project as if we ourselves own it, we can help you make sound economic choices that will minimize first costs, reduce operating costs, and save you money for as long as your building and equipment are operating.

*Providing solutions to make a safer, more productive, profitable environment*
